Information sharing is a key element in detecting security breaches and proactively protecting information systems and infrastructures, but the practical aspect is often forgotten. Alexandre Dulaunoy offers an overview of MISP, a free software tool that supports information-sharing practices among communities, and shares some lessons learned while building it.

Topics include:

An overview of the information-sharing challenges in cybersecurity

Best practices in information security

The history of the MISP platform and the open source/free software community behind

How the development of the free software project helps to support information-sharing practices

How the platform is designed to support analysts, reversers, and ICT professionals in their day-to-day activities

The ongoing projects in the MISP platform and how you can contribute

#Sharing #Software #NetworkSecurity
