How the Word Cloud Generator Works

The layout algorithm for positioning words without overlap is available on GitHub under an open source license as d3-cloud. Note that this is the only the layout algorithm and any code for converting text into words and rendering the final output requires additional development.

As word placement can be quite slow for more than a few hundred words, the layout algorithm can be run asynchronously, with a configurable time step size. This makes it possible to animate words as they are placed without stuttering. It is recommended to always use a time step even without
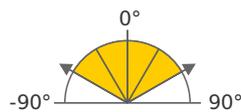

Go!

Spiral: ● Archimedean ○ Rectangular          5          orientations from -60          ° to 60          °                    Number of words: 250

Scale: ● log n ○ √n ○ n                                                                                            ☐ One word per line
